- Resolution set to not reproducible
- Status changed from Open to Closed

A lot more is necessary to allow us replicate locally the reported issue.

Anyway as you can guess this is very likely a local issue, likely depending on a 3rd party plugin and/or a legacy configuration file.

Please try (backup and) delete the .qgis2 folder, then restart qgis and try again.

If it still happen then reopen this ticket, not without attaching sample data and exact steps describing hoe to replicate the problem.
