

QGIS Application - Bug report #16037

QGIS crashes with PostGIS connection

2017-01-05 04:45 AM - Sujan Dahal

Status:	Closed	
Priority:	High	
Assignee:		
Category:	Data Provider/PostGIS	
Affected QGIS version:	2.18.2	Regression?: No
Operating System:	Windows 7	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 23952
Description I am using PgAdmin version 1.18.1 on windows 7. When I add a new PostGIS connection in QGIS and opt. not to save password in the connection (or save username/ password but only one) it works perfectly fine for first time. Now, when I close QGIS and open it again, QGIS freezes at Enter Credentials dialogue box (for PostGIS connection) and crashes without possibility to enter username and/or password. Until I completely disconnect my internet connection and open QGIS again and remove previous PostGIS connection, QGIS cannot be opened.

- Status changed from Open to Feedback
- Category set to Data Provider/PostGIS

I cannot replicate or I don't understand the issue (what's the role of pgadmin here?) or how replicate. Please add exact steps.
