Hi Laurent,

Looks like your libspatialite and/or your libsqlite3 are not built right. InitSpatialMetadata() is part of Spatialite and should be the functional if your version is fairly recent. Verify your Spatialite install works right and is linked to your custom SQLite3 (not the system's).

Note: not sure you are going to succeed here, trying to compile on 10.6.8. I'd suggest the minimum macOS for 2.14 and above would be 10.7. I'd recommend at least 10.9.5. Of course, those versions may not be an option for you.
