

QGIS Application - Bug report #1618

color table for GRASS rasters

2009-04-02 03:04 PM - Paolo Cavallini

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	GRASS	
Affected QGIS version:		Regression?: No
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:		Resolution: duplicate
Crashes QGIS or corrupts data:		Copied to github as #: 11678
Description		
<p>Newly created GRASS rasters do not get a color table assigned, and no choice is given to the user as to which color table to assign. As a result, one has to load the raster, assign a color table to it, and refresh the canvas to show the new colors. Quite boring and cumbersome for serious work.</p>

#2 - 2009-04-04 01:10 PM - Maciej Sieczka -

The reason is that some GRASS modules (e.g. r.mapcalc) don't create a color table for their output rasters.

If a GRASS display module encounters such a raster it defaults to 'rainbow' colortable.

Should QGIS do the same?
