Affected QGIS version:	master	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	fixed/implemented
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	24144

Description

QGIS master doesn't respect the user's selected icon size upon launch. Regression occurred following the merging of the QgsSettings PR.

Steps to reproduce

1. Launch QGIS, and open the Options window
2. In the general panel, change the icon size to 16 (the toolbar icon size will shrink to 16)
3. Quit QGIS and relaunch the app
4. Notice the icon size are not set to 16 x 16, but instead are rendered using the default 24 x 24 size
5. Open the Options window, and notice the icon size is 16 x 16 (yet, as stated above, the value isn't read/used)

History

#1 - 2017-04-09 06:16 PM - Mathieu Pellerin - nIRV

- Resolution set to fixed/implemented

- Status changed from Open to Closed

Fixed along the way, closing.
