

QGIS Application - Bug report #16248

Processing / Import layer in PostGIS

2017-02-28 07:59 AM - didier peeters

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Processing/OGR	
Affected QGIS version:	2.18.3	Regression?: No
Operating System:	Mac	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	No	Copied to github as #: 24158
Description		
<p>None of the tools made to import layers in PostGIS(available in the Processing tools) can select a layer.</p> <p>The dropdown list to select one doesn't react.</p> <p>Experienced with QGis 2.18 .</p>		

History

#1 - 2017-03-01 03:34 AM - Giovanni Manghi

- File *Screen_Shot_2017-03-01_at_11.39.47.png* added
- Target version deleted (Future Release - High Priority)
- Priority changed from High to Normal
- Status changed from Open to Feedback
- File *Screen_Shot_2017-03-01_at_11.33.27.png* added

Can't confirm here (also 10.12), see attached images

Thanks for this fast answer.

I made some more test on other systems:

Other Mac 10.12 -> not ok (doesn't work) / QGis 2.18 from Kyngchaos

Other Mac 10.12 -> not ok / QGis 2.18 from homebrew

Windows 8 -> not ok / QGis 2.14

on 5 Windows 7 -> ok / QGis 2.14 and 2.18

Linux Mint -> ok / QGis 2.14

All our systems are in french except one Win7, Postgresql used are 9.6 and 9.2 but I doubt it has any relation.

Do you have any clue about where to look ?

Are there any specificities related to the layers that could be problematic ?

I added a screen capture just in case.

your screenshot is from the modeler: if in the model you don't have any input vectors already in place then is **normal** the tool to not show any possible input.

Please check and leave further feedback.

#4 - 2017-04-29 07:29 AM - Giovanni Manghi

- Status changed from Feedback to Closed

- Resolution set to not reproducible

Closing for lack of feedback, please reopen if necessary.
