QGIS Application - Bug report #16291
Warp (reproject) Raster Filename Error

2017-03-06 02:07 AM - Rainer Spalt

Status:	Closed		
Priority:	Normal		
Assignee:	Giovanni Manghi		
Category:	Processing/GDAL		
Affected QGIS version:	2.18.4	**Regression?:**	No
Operating System:	Windows	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	fixed/implemented
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	24201

Description

When you try to reproject a Raster and the filename has an underline in it you'll get the Error:

"ERROR 6: Invalid filename. Must be ABCDEF01.GEN "

This occurs not only the filename itself like "test*_*01.tiff" but also in the pathname like "C:/User/..../Project*_*01/test.tiff"

Seems like a rather trivial problem, but we work a lot with underlines on our local server. For now we have to save it in a dummy folder and then copy the file to the actual project folder.

This issue is in 2.14. and 2.18 Version

History

#1 - 2017-03-06 04:12 AM - Giovanni Manghi

- Category changed from Rasters to Processing/GDAL

- Target version set to Version 2.18

- Assignee set to Giovanni Manghi

#2 - 2017-05-01 01:01 AM - Giovanni Manghi

- Regression? set to No

- Easy fix? set to No

#3 - 2017-07-22 02:02 PM - Giovanni Manghi

- Resolution set to fixed/implemented

- Description updated

- Status changed from Open to Closed

It works as expected in both cases in 2.18.10 (underscore in filename and path, this even before https://github.com/qgis/QGIS/pull/4906)
