

QGIS Application - Bug report #16359

In the print composer dynamically referencing to page size presets leads to wrong expression evaluation

2017-03-16 04:48 AM - Johanna Seibert

Status:	Closed	
Priority:	Low	
Assignee:		
Category:	Expressions	
Affected QGIS version:	2.18.4	Regression?: No
Operating System:	Debian Jessie	Easy fix?: No
Pull Request or Patch supplied:		Resolution: not reproducible
Crashes QGIS or corrupts data:		Copied to github as #: 24269
Description		
<p>In the print composer a preset page size is set (e.g. A0). Item sizes/positions are defined using expression evaluation like "@layout_pagewidth -10". When changing the preset page size, it is expected that the item variable follows the change. However, the expression seems to be evaluated with the old layout presets. A work around is saving the project with the new page sizes and after reload the expression has been correctly evaluated.</p>
