

QGIS Application - Feature request #16452

Can a project 'remember' where the Composer output was saved?

Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>I work with many projects, and often come back to one after a number of years, and save my PDF and JPG files to a fairly complicated directory structure. Currently, QGIS remembers where I last saved my output, but I would like for it to remember where it saved the output for that particular project.</p> <p>Is that possible?</p>
