Description

Aloha,

Sorry, I only have a 2.10 version in my office, so I couldn't test on latest version of QGis.

Here's the issue. I'm composing an atlas. Many pages, and they don't have the same scale. So I'm using the "segment width adjustment" to maintain scalebar in a tiny space (60mm).

But as you may see in the printscreen uploaded, as the pages are printed, the scalebar is moving to the right, and falling into darkness.

Is this a known behavior ? Is there a fix in newest version ?

Thanks in advance.

Well, in 2.14, the problem is solved.
