

QGIS Application - Bug report #16482

Moved labels and symbols with an offset not displayed correctly in print composer

2017-04-28 01:58 PM - R. R.

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Map Composer/Printing	
Affected QGIS version:	2.18.7	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: end of life
Crashes QGIS or corrupts data:	No	Copied to github as #: 24390
Description		
Moved labels and symbols with an offset get lost in the print composer when the geometry is not located on the current map.		

History

#1 - 2017-04-28 01:59 PM - R. R.

- File 16482.gif added

#2 - 2017-04-28 02:00 PM - R. R.

<https://issues.qgis.org/attachments/10905/16482.gif>

#3 - 2017-04-28 02:16 PM - R. R.

- File 16482.zip added

#4 - 2017-04-29 01:05 AM - R. R.

- File 16482.png added

Labels and symbols that are intersecting the map also get lost when the geometries are located outside the map:

#5 - 2017-05-01 01:01 AM - Giovanni Manghi

- Easy fix? set to No

- Regression? set to No

#6 - 2017-05-01 02:16 AM - Giovanni Manghi

- Priority changed from High to Normal

#7 - 2017-05-03 11:54 AM - R. R.

Is this bug related to #15955? ('Avoid artifacts when project is rendered as map tiles' option broken?)

#8 - 2017-05-03 01:06 PM - Nyal Dawson

It's a partial duplicate of #12609

#9 - 2019-03-09 03:09 PM - Giovanni Manghi

- Status changed from Open to Closed

- Resolution set to end of life

End of life notice: QGIS 2.18 LTR

Source:

<http://blog.qgis.org/2019/03/09/end-of-life-notice-qgis-2-18-ltr/>

QGIS 3.4 has recently become our new Long Term Release (LTR) version. This is a major step in our history – a long term release version based on the massive updates, library upgrades and improvements that we carried out in the course of the 2.x to 3x upgrade cycle.

We strongly encourage all users who are currently using QGIS 2.18 LTR as their preferred QGIS release to migrate to QGIS 3.4. This new LTR version will receive regular bugfixes for at least one year. It also includes hundreds of new functions, usability improvements, bugfixes, and other goodies. See the relevant changelogs for a good sampling of all the new features that have gone into version 3.4

Most plugins have been either migrated or incorporated into the core QGIS code base.

We strongly discourage the continued use of QGIS 2.18 LTR as it is now officially unsupported, which means we'll not provide any bug fix releases for it.

You should also note that we intend to close all bug tickets referring to the now obsolete LTR version. Original reporters will receive a notification of the ticket closure and are encouraged to check whether the issue persists in the new LTR, **in which case they should reopen the ticket**.

If you would like to better understand the QGIS release roadmap, check out our roadmap page! It outlines the schedule for upcoming releases and will help you plan your deployment of QGIS into an operational environment.

The development of QGIS 3.4 LTR has been made possible by the work of hundreds of volunteers, by the investments of companies, professionals, and administrations, and by continuous donations and financial support from many of you. We sincerely thank you all and encourage you to collaborate and support the project even more, for the long term improvement and sustainability of the QGIS project.
