

QGIS Application - Bug report #16483

delimited driver - multipoint from WKT fails for geometries where all longitudes are negative

2017-04-28 03:27 PM - Steven Kay

Status:	Closed	
Priority:	Normal	
Assignee:	Nyall Dawson	
Category:	Data Provider/OGR	
Affected QGIS version:	2.18.3	Regression?:
Operating System:	ubuntu	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 24391
Description		
<p>when loading in a delimited file with WKT geometry of type MultiPoint, geometries are invalid if all longitude values are negative. QGIS 2.18.3.</p> <p>code samples here on gis stack exchange : https://gis.stackexchange.com/a/238583/55203</p> <p>this seems to be restricted to the delimited text provider; it works fine with shapefiles and geoJSON. If I split the multipoints into distinct point geometries, or use linestrings, it works.</p> <p>It doesn't seem related to line length (truncation), geometry direction or the dateline issue (values of +/-180 or +/-90 for longitude and latitude).</p> <p>I've also tried shuffling the points at random, applying jitter (to rule out issues with mixed int/float parsing).</p> <p>It seems to be an import issue, not a rendering/projection issue.</p>

Revision ef6c8be1 - 2017-04-30 12:23 AM - Nyall Dawson

Fix import WKT of the format MultiPoint (-20 -90, -20 -88)

Should technically be MultiPoint ((-20 -90), (-20 -88)), but it's nice to be forgiving and accept as wide a range of WKT formats as possible

Fix #16483

Revision fad23dda - 2017-05-09 03:56 AM - Nyall Dawson

Fix import WKT of the format MultiPoint (-20 -90, -20 -88)

Should technically be MultiPoint ((-20 -90), (-20 -88)), but it's nice to be forgiving and accept as wide a range of WKT formats as possible

Confirmed - the issue stems from MultiPoint WKT of the format

MultiPoint (-20 -90, -20 -88)

The format

MultiPoint ((-20 -90),(-20 -88))

works correctly.
