

QGIS Application - Bug report #1652

Map refresh 15sec freezes with GRASS maps

2009-04-24 06:07 AM - Markus Neteler

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	GRASS	
Affected QGIS version:		Regression?: No
Operating System:	Mandriva	Easy fix?: No
Pull Request or Patch supplied:		Resolution: invalid
Crashes QGIS or corrupts data:		Copied to github as #: 11712
Description		
<p>Since recently (2 weeks?) I have troubles with the map refresh in the Version_1 branch. Loading either GRASS raster or vector map slows extremely down the display in QGIS, even when moving the mouse over the map QGIS freezes for 15-20 seconds (CPU at 100%), then I can continue.</p> <p>This renders QGIS almost unusable. I have recompiled everything (GDAL, GDAL-GRASS-plugin, QGIS) but it won't help.</p> <p>64bit Mandriva 2009.0 with security updates (qt is the same as before).</p>

Has this been sorted out Markus?

#2 - 2009-04-26 10:17 AM - Paolo Cavallini

I cannot confirm this in Debian Lenny, also 64bit

#3 - 2009-04-27 09:42 AM - Markus Neteler

- Resolution set to invalid

- Status changed from Open to Closed

Perhaps it was caused by spurious cruft in the install directory. Will close for now.
