

QGIS Application - Bug report #1657

Vector Layer Translate Feature

2009-04-27 05:16 AM - jopan -

Status:	Closed	
Priority:	Low	
Assignee:	Marco Hugentobler	
Category:	Python plugins	
Affected QGIS version:		Regression?: No
Operating System:	Debian	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 11717
Description		
<p>Writing a Python plugin to allow the user to translate a whole vector layer by a given shift I use the translateFeature() of the [[QgsVectorLayer]] class but if the layer is zoomed the function translates only the visualized features.</p> <p>I use the following code:</p> <pre>vlayer = iface.activeLayer() provider = vlayer.dataProvider() attrs = provider.attributeIndexes() provider.select(attrs) f = [[QgsFeature]]() while provider.nextFeature(f): error_code = vlayer.translateFeature(f.id(), delta_x, delta_y)</pre> <p>If the feature to translate is not one of the visualized features, the error_code is 1 and the feature is not translated.</p>		

History

#1 - 2009-04-27 08:50 AM - Marco Hugentobler

- Resolution set to fixed

- Status changed from Open to Closed

Fixed in trunk commit:e137b095 (SVN r10668)
