

QGIS Application - Feature request #16592

Bring selected to top

2017-05-22 11:13 AM - Willem Coetzer

Status:	Open	Resolution: Copied to github as #: 24494
Priority:	Normal	
Assignee:		
Category:	GUI	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>I have a point shapefile containing points that may be stacked precisely on top of one another, which means that when I make a selection in the attribute table, I don't always see the selected point. Please develop a 'bring selected feature to top' button.</p>

have you tried the "point displacement" renderer?

#2 - 2017-05-23 02:29 PM - Willem Coetzer

- File Obscured.JPG added

The Point displacement renderer is not an adequate solution. I have attached a picture to show a point obscured by an overlying point. I need a function that will bring the obscured point to the top so that it is more visible. In this case, when you are zoomed out even further the obscured point is completely invisible.
