QGIS Application - Bug report #1664
fTools geoprocessing changes field format

2009-04-29 01:09 PM - Maxim Dubinin

Status:	Closed			
Priority:	Low			
Assignee:	cfarmer -			
Category:	Python plugins			
Affected QGIS version:			**Regression?:**	No
Operating System:	All		**Easy fix?:**	No
Pull Request or Patch supplied:			**Resolution:**	fixed
Crashes QGIS or corrupts data:			**Copied to github as #:**	11724

Description

Tried Clipping with fTools, everything is fine, but fields of the output are changed to different length and number of decimals. This is small, but I guess it should better be kept as in source.

History

#1 - 2009-05-06 02:05 PM - Borys Jurgiel

It's related to the [[QgsShapefileWriter]] issues. See #1681.

#2 - 2009-05-06 02:09 PM - Borys Jurgiel

Sorry, of course I mean [[QgsVectorFileWriter]]

#3 - 2009-07-11 06:42 AM - Giovanni Manghi

I cannot replicate this, qith qgis 1.2 from trunk and the latest version of ftools. Tested both shapefiles and postgis layers.

Can you give a try with the latest version of the plugin and/or post the sample data that gave you problems?

#4 - 2009-07-11 08:49 AM - Maxim Dubinin

Still no luck. Tried clipping attached points with polygon. Note properties before and after. QGIS 1.2-trunk.

#5 - 2009-07-11 08:52 AM - Maxim Dubinin

attachements and screenshots of field structure, before and after

Replying to [comment:6 gislab]:

> *Still no luck. Tried clipping attached points with polygon. Note properties before and after. QGIS 1.2-trunk.*

Ok, now I see and I confirm. Probably my first test was made with layers that had already this 32/3 values for lenght/precision.

#7 - 2009-07-30 02:17 PM - Jürgen Fischer

- Resolution set to fixed

- Status changed from Open to Closed

fixed in commit:16b91c6b (SVN r11219)
