

QGIS Application - Bug report #1665

Use of relative paths for SVG symbols in QGIS project file

2009-04-30 01:25 AM - Andreas Neumann

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Project Loading/Saving	
Affected QGIS version:		Regression?: No
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:		Resolution: duplicate
Crashes QGIS or corrupts data:		Copied to github as #: 11725
Description		
<p>Currently, QGIS uses absolute paths in project files. This is a problem when moving projects around, especially when using it in multiple operating systems.</p> <p>QGIS should use relative paths (relative to the qgis/share/svg directory), which is different on every platform.</p> <p>as an example: svg:/usr/local/share/qgis/svg/abwasser/Baujahrwechsel.svg should be changed to svg:abwasser/Baujahrwechsel.svg</p> <p>QGIS should also automagically replace forward with backward slashes when it opens on the windows platform. It would be useful to use the forward slashes notation in the project file for all platforms to be consistent. This is also the convention with URLs.</p> <p>Thanks for looking at this problem.</p>
