

QGIS Application - Bug report #16716

QGIS MSSQL connection creation issue

2017-06-16 10:06 AM - Jerome Anthony

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Data Provider/MSSQL	
Affected QGIS version:	2.18.1	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: invalid
Crashes QGIS or corrupts data:	No	Copied to github as #: 24615
Description I am on OSX (mac) I have created a DSN using iODBC Administrator. When I try to create a MSSQL layer using the DSN connection, the connection times out with the attached prompt. If anyone has any useful documentation on how to configure a MSSQL connection, appreciate it a lot. Thanks for QGIS

- Status changed from Open to Closed
- Resolution set to invalid

Use the native MSSQL provider that QGIS has. See attached image.

Hi Giovannie,

I am still getting errors, and it's not very obvious on how to proceed further

in "host" use the IP address or host name of the server, you don't need to create a DSN with ODBC and use it. QGIS connects natively and directly to mssql server.

could you please try an see if it happens also on Windows or Linux?
in any case this would be a separate issue and needs a separate ticket.

I have no trouble connecting to MSSQL from Windows desktop but Linux (Ubuntu) desktop produces 'driver not laoded' error.
There's an issue for that #16718
