

QGIS Application - Bug report #1672

keyColumn and sql are in wrong order in qgsdatasourceuri.cpp

2009-05-01 01:50 AM - Horst Düster

Status:	Closed	
Priority:	Low	
Assignee:	Jürgen Fischer	
Category:	Data Provider	
Affected QGIS version:		Regression?: No
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 11732

Description

The new option keyColumn should appear after the option sql in src/core/qgsdatasourceuri.cpp.

With the trunk version former defined datasources allocates sql queries as keycolumn. After changing the order of &keyColumn and &sql everything works fine. Take a look at the code snippets please.

The definition also doesn't correspond with qgsdatasourceuri.h.

Wrong allocation:

```
void [[QgsDataSourceURI]]::setDataSource( const QString &schema,
                                         const QString &table,
                                         const QString &geometryColumn,
                                         const QString &keyColumn,
                                         const QString &sql )
{
    mSchema = schema;
    mTable = table;
    mGeometryColumn = geometryColumn;
    mKeyColumn = keyColumn;
    mSql = sql;
}
```

working allocation:

```
void [[QgsDataSourceURI]]::setDataSource( const QString &schema,
                                         const QString &table,
                                         const QString &geometryColumn,
                                         const QString &sql,
                                         const QString &keyColumn )
{
    mSchema = schema;
    mTable = table;
    mGeometryColumn = geometryColumn;
    mKeyColumn = keyColumn;
    mSql = sql;
}
```
