## Description

On 2.18.10 looks like

Error executing query: SELECT styleQML FROM layer_styles WHERE f_table_catalog='/home/giovanni/Desktop/qqq.sqlite' AND f_table_schema='' AND f_table_name='aaa' AND f_geometry_column='geometry' ORDER BY CASE WHEN useAsDefault THEN 1 ELSE 2 END,update_time DESC LIMIT 1

on 2.14.16

Error executing query: SELECT styleQML FROM layer_styles WHERE f_table_schema='' AND f_table_name='aaa' AND f_geometry_column='geometry' ORDER BY CASE WHEN useAsDefault THEN 1 ELSE 2 END,update_time DESC LIMIT 1

does not happen with geopackages.

## History

#### #1 - 2019-02-23 01:49 PM - Rocco Pispico

I tested the issue in Postgres with QGIS 3.4. in order to know if the problem is still active, and it seems to be ok.

In Spatialite the  f_table_catalog contains '' string and the f_geometry_column contains 'GEOMETRY' in uppercase.

In Geopackage the  f_table_catalog contains '' string and the f_geometry_column contains 'geom'.

Now in the 3 databases the query is correct and it doesn't produce any message error but in Spatialite and Gpkg the query returns nothing.

Can you better explain the problem?

please change status to "feedback"

#### #3 - 2019-02-23 03:20 PM - Paolo Cavallini

*- Status changed from Open to Feedback*

#### #4 - 2019-02-23 10:37 PM - Giovanni Manghi

*- Resolution set to fixed/implemented*

This was something related to styles saved within the SL database. If the style is created in QGIS 3 and then layer loaded in QGIS 3 there is no more

message in log.
