

QGIS Application - Bug report #16825

NULL value issue in range widget: a value of 0 is incorrectly displayed as NULL

2017-07-10 10:23 AM - Andreas Neumann

Status:	Feedback	
Priority:	Normal	
Assignee:		
Category:	Edit widget	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 24724
Description		
An attribute field of a particular feature has a value of 0.000 and a range widget assigned. The Postgis type is "numeric(9,3)". "Allow NULL" is enabled in the edit widget options. If one opens the form (editing mode enabled) with the identify tool, the display value is "NULL" instead of the zero that exists in the data. 0 or 0.000 should be displayed instead. Three screenshots are attached to show the configuration, edit form and attribut table. The concerned attribute is "vonkm".
