

QGIS Application - Feature request #16835

Side column in form view remembers columns, but no expressions

2017-07-10 03:04 PM - Andreas Neumann

Status:	Closed	Resolution: fixed/implemented Copied to github as #: 24734
Priority:	Normal	
Assignee:	Matthias Kuhn	
Category:	Forms	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>The side column in form view allows to select either an attribute column or an expression.</p> <p>It remembers previous column names, but not previous expressions used in this context.</p> <p>In our opinion, it is much more important to remember expressions (since they may be more complex) than attribute columns, which can be easily reselected from the list "Column Preview". Remembering previous columns isn't really important, but previous expressions would be important.</p> <p>See attached screenshot as an illustration where this applies.</p>		

History

#1 - 2017-10-23 10:50 AM - Andreas Neumann

- Resolution set to fixed/implemented
- Status changed from Open to Closed

implemented in commit:f0cf4c3ee8a29847796ed956da3c832372312a2c

#2 - 2017-10-23 10:55 AM - Andreas Neumann

- Assignee set to Matthias Kuhn
