Description

Is there a way to print a cloud map that uses the OpenLayers plugin and have the basemap show up when the user tries to print? Currently, I'm using OpenLayers as my base map, but when I go to print, the base map is no longer there and I'm left with just a blank background. Is it only possible to print the features that appear in the Layers & Legend or can the user print, for example, an OpenStreetMap if they wanted to?

Use the quick map services plugin instead of the open layers one, then from its options add the additional map sources (like google, bing, etc.). With this plugins the layers are fetched as WMS layers, that are printable.

In general please post questions on the users or developers mailing lists. Thanks!
