It seems either your PyQt4 installation doesn't provide the QtWebKit module at all, or it does, but under different path that the default PyQt4.QtWebKit. You didn't tell much about your operating system, but please ensure you don't need to install an additional package (like python-qt4-qtwebkit or so) in your package manager.

Please note QGIS 1.8 is very outdated now and not supported for years. The same with Sextante.

- Resolution set to invalid
- Status changed from Open to Closed

Agree with Borys, 1.8 is completely outdated and unsupported. Please install the latest LTR (2.14.17) or 2.18.11. No need to install "sextante", along the years is became "Processing" and is now part of QGIS out of the box.

try this

https://copr.fedorainfracloud.org/coprs/neteler/QGIS-2.18-Las-Palmas/

worked for me with no issues on CentOS.
