Pull Request or Patch supplied:	No		
Easy fix?:	No	Resolution:	duplicate
		Copied to github as #:	24908
Description			
<p>Hello,</p> <p>I've had a few problems with the proxy settings in QGIS, which are solved now. But when I was attempting to solve the issue I saw that in the registry the loginname and password for the proxy weren't encrypted. For security reasons I think that the password in the registry should be encrypted. Is this something that is on the roadmap for future releases?</p> <p>Thanks in advance for your answer,</p> <p>Greetings,</p> <p>Martijn</p>

QGIS tells you that it's going to save the passwords in plain text - so no surprise there. And there's the possibility to alternatively use the authentications store.
