Crashes QGIS or corrupts data:	Yes	Copied to github as #: 24944
Description I am trying to identify a feature temporarily stored in "/tmp/tmpCOGrxI_multipolygons_quickosm.shp" directory. (These set of features were downloaded using Quick OSM Plugin). Whenever I used the identify tool on the said feature, QGIS unexpectedly closes. My version of QGIS is 2.18.12

Hello Giovanni,

Here is the output from the terminal after crashing:

"Segmentation fault"

I tried on the same platform and qgis version as also on Windows and cannot replicate.

Please try removing any other 3rd party plugin then restart qgis. You may want also to (backup and) delete the .qgis2 folder, reinstall quick osm and try again.

cheers
