

QGIS Application - Feature request #17053

font reference in SLD se1.0 can we support the geoserver vendor option

2017-08-24 10:25 AM - Paul van Genuchten

Status:	Open	Resolution: Copied to github as #: 24952
Priority:	Normal	
Assignee:		
Category:	Symbology	
Pull Request or Patch supplied:		
Easy fix?:	Yes	
Description		
<p>SLD version 1.0 didn't have support for referencing a symbol from a font geoserver proposed a vendor convention to reference a font like this</p> <pre><Rule> <Name>Gelders Genootschap, Gelders Arcadi0</Name> <PointSymbolizer> <Graphic> <Mark> <WellKnownName>ttf://Arial#0x23</WellKnownName> <Fill><CssParameter name="fill">#000000</CssParameter></Fill> </Mark> <Opacity>1</Opacity> <Size>18</Size> </Graphic> </PointSymbolizer> </Rule></pre> <p>QGIS uses 1.1 by default, which does have support for this however if you import an sld version 1.0 with above font reference, qgis doesn't recognise the font/symbol</p> <p>I propose to extend the SLD 1.0 reader to support the geoserver vendor option</p> <p>Recent versions of Geoserver support SLD 1.1, however 1.0 is still quite common in that community</p>
