<b>Description</b>		
<p>Point Layer Symbology Properties &gt; select Assistant from the Data Defined button near the Size property</p> <p>In the new dialog, set the input options</p> <p>Expand the Apply transform curve: there is straight line</p> <p>Enable the checkbox and play with it --&gt; The symbol representation will change accordingly in the right panel</p> <p>Uncheck the "Apply transform curve" option: instead of having the symbols restored at the initial representation in the right panel, you still get the transformed one.</p> <p>I can't tell whether this has an effect on the canvas given that no symbol is rendered (see #17061). But reopening the assistant dialog show the initial good preview with an unchecked "apply transform curve"</p>
