Easy fix?:	No	
Description		
<p>It would be nice to have an option (under general options, composer) for having a default file format for export. Currently you are offered with a pretty big list of formats (some of them seldom used) so every time you export a map you have to look for the format you want. When you are exporting several (tens) of maps, it's a little annoying.</p> <p>In my opinion, this feature should offer the default file format (i.e. *.png) as first option an then the other options in alphabetical order.</p> <p>Some directions on best way to implement it would be appreciated as well, in the case I could face coding it and make a pull request.</p> <p>Thank you very much</p>
