

QGIS Application - Bug report #17240

When a node on the end of a path is selected and dragged, the whole line moves instead of just that node

| Description This is not very intuitive with the new editing system. If my line has a node on the end of it, and I put the mouse over that node and click it, I should be able to drag just that node to a new position (as was the case with the previous digitising/editing system). Instead, the whole line moves (like the moving tool does). (see also discussion in #16836) | | |

Same comment as #16836-8

I can understand your point but it could be very well a decision taken on purpose by who re-designed the tools. This should be discussed in the community and **then** eventually consider it a bug.

#2 - 2017-10-04 10:39 AM - Andreas Neumann

I agree with Patrick. Selecting a single vertex, only that vertex should be moved, not the whole segment or even the whole feature.

#3 - 2017-10-04 10:40 AM - Patrick Dunford

Just started a thread on the developers list

#4 - 2017-10-04 12:38 PM - Harrissou Santanna

I can't reproduce using commit:58f64bb4 on Win 10

#5 - 2017-10-04 01:50 PM - Giovanni Manghi

Also can't confirm.

#6 - 2017-10-04 02:37 PM - Patrick Dunford

Not sure about this one at the moment. It was definitely happening yesterday when I was trying to edit some data, but I haven't nailed it down today.
