Description

I'm not sure this should be categorized as a bug or just a feature request.

from a closed feature request: #10323
copy/paste style for multiple layers

It seems that this got implemented only through tree view menu (right-click)

But when using menu "Layer / Paste Style", it only pastes on the latest select layer, and if you select a group, Paste command is just grayed out.

If the menu command also works, you will be able to just map a keyboard shortcut to Paste on multiple selected or group selected. That would be awesome.

Thank you.

I confirm that QGIS 3.4.4 is still affected to this issue.

"Layer / Paste Style" only paste into a latest selected single layer, not the whole range of selection.
