

QGIS Application - Bug report #17376

QgsSettings::beginGroup() is superior to QgsSettings::Section

2017-11-01 10:40 PM - Borys Jurgiel

Status:	Feedback	
Priority:	Normal	
Assignee:	Nathan Woodrow	
Category:	Unknown	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 25273
Description		
Just a simple example: <pre>QgsSettings settings; settings.beginGroup("my_group"); settings.setValue("my_key", 7, QgsSettings::Section::App)</pre> results with: <pre>[my_group] app/key=7</pre> Shouldn't beginGroup() optionally accept QgsSettings::Section? Like that: <pre>void beginGroup(const QString &prefix, const QgsSettings::Section section = QgsSettings::Section::NoSection);</pre> I marked it as a bug, as it causes rather unexpected results and makes beginGroup() more or less useless.
