Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	25324

Description

Editing of Z value via the node editor is broken for memory point layers created via the "new temporary scratch layer".

Steps to reproduce

1. Create a new project
2. Create a new new memory layer, set it to point (or multipoint) and check the [x] geometries with Z/M values option
3. Add a new point feature to that created layer, and save the layer (to insure the feature is visible, see issue 17426)
4. Switch to the node tool, and right click on the point to open the node editor
5. Notice the Z value is "nan"
6. Try to change the Z value to a number
7. Notice the value reverts to "nan"
