

QGIS Application - Bug report #17562

WMS legend broken for percent-encoded LegendURL's

2017-11-27 11:19 AM - Richard Duivenvoorde

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Web Services clients/WMS	
Affected QGIS version:	master	Regression?: Yes
Operating System:		Easy fix?: Yes
Pull Request or Patch applied:	Yes	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	No	Copied to github as #: 25459
Description		
Some WMS services, eg: http://gisservices.noord-holland.nl/ags/services/pnh_dataservice_alg/MapServer/WMServer?request=GetCapabilities&#38;service=WMS have their (valid) LegendURL's percentage-encoded in the capabilities, eg: http://gisservices.noord-holland.nl/ags/services/pnh_dataservice_alg/MapServer/WmsServer?request=GetLegendGraphic%26version=.3.0%26format=image/png%26layer=Bouwen op slappe grond - Damwand complexiteit While this was working in 2.18/qt4, this returns a 'flawed image' in 2.99 because QGIS adds a second &FORMAT=image/png to the url, while the server can apparently only handle one. I'll add a Pull Request to fix this.
