

QGIS Application - Bug report #17655

Error: qgis-ltr-bin.exe has stopped working

2017-12-08 12:01 PM - Rodolfo Silva

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Unknown	
Affected QGIS version:	2.14.19	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 25552
Description		
<p>After a few days of installing the version QGIS 2.14.19, whenever I use the properties of a layer (Right click on the layer and select Properties), an error appears as you can see attached (qgis-ltr-bin.exe has stopped working).</p> <p>I did some research but... no results! I also uninstalled QGIS and reinstalled...</p> <p>Suggestions?</p> <p>Thank you very much!</p>

Could you:

- Update to the latest QGIS LTR (2.18)
- Rename your plugin folder so that we are sure the crash is not due to a plugin

- File *I_cannot_load_vector_data2.JPG* added

I'm having this issue with QGIS 2.18.15 on Windows 7 64bit machine. I can load and work with rasters, but I cannot open the properties on the most simple shapefile. I cannot open old projects with just a simple shapefile.

I have uninstalled and reinstalled several times. I have turned off all plugins. I have used the registry editor to remove all QuantumGIS info from the HKEY_CURRENT_USER key. I have restarted after all installations (I also tried version 2.14 for a try, I tried the 32-bit version, too).

I don't know much about IT topics, I got help to learn about the registry edit idea.

this issue in not related to this specific ticket, you should open a new one. There attach the projects (with the data) that are causing you this problem. Also specify what version of QGIS was used to save this projects.
