

## QGIS Application - Bug report #1766

### Installer skips all files and completes without installing anything

2009-07-10 08:33 PM - arvydar -

<b>Status:</b>	Closed	
<b>Priority:</b>	Low	
<b>Assignee:</b>	nobody -	
<b>Category:</b>	Build/Install	
<b>Affected QGIS version:</b>		<b>Regression?:</b> No
<b>Operating System:</b>	Debian	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>		<b>Resolution:</b> worksforme
<b>Crashes QGIS or corrupts data:</b>		<b>Copied to github as #:</b> 11826
<b>Description</b>		
<p>I have tried several times to install the Windows version of QGIS on a Windows Vista partition of a Macbook running bootcamp that already has QGIS Mac version installed on the mac partition. Windows sees the Windows partition as the "C:" drive and selects "Program Files" as the install directory. The installation appears to go normally until it shows "Skipped: " and scrolls past all the files before saying "Quantum GIS 1.0.2 has been installed on your computer"</p>		

#### History

I already seen this behaviour when trying to install on Vista on colleagues pc. If I'm not wrong you have to execute the installer as admin/with admin authorization (or something like that, I don't use nor own Vista).

Please give it a try and report back.

##### #2 - 2009-07-13 04:50 AM - Giovanni Manghi

- Resolution set to worksforme

- Status changed from Open to Closed

As supposed you need to run the installer with admin privileges:

right click on the file -> properties -> compatibility -> run this program as administrator

##### #3 - 2009-07-13 07:09 AM - arvydar -

I only have one account on my Vista partition and it is an administrator account. I did manage to get QGIS installed later using the online installer, so all is good now.

I guess that this doesn't count much: there are still a bunch of applications you need to do the

right click on the file -> properties -> compatibility -> run this program as administrator

in order to be able to install them on Vista.
