QGIS Application - Bug report #17699
Cell contents replaced with NULL when cell gets focus

2017-12-15 01:01 PM - Frank Sokolic

Status:	Closed		
Priority:	High		
Assignee:			
Category:	Attribute table		
Affected QGIS version:	master	**Regression?:**	No
Operating System:	Ubuntu 17.10	**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	fixed/implemented
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	25596

Description

When editing the attribute table of a shapefile, if I click in a cell the value in the cell is replaced with a NULL. If I then click in another cell the value of the first cell remains null and the original value is lost.

History

Seems platform specific as I can't confirm on Windows using the latest osgeo4w build (commit:bbf00279ad). *Null* value is shown only when the cell was not set and this displayed value is cleared when another cell gets focus, ie no changes occurs in the table when moving from cell to cell here.
Do you have the latest build?

- Priority changed from Normal to High

#3 - 2018-02-27 12:33 PM - Frank Sokolic

- Status changed from Open to Closed

I've just checked on the newly released QGIS 3.0.0-Girona and the problem no longer occurs. No sure when it was fixed.
