Description

Select features, copy them

Edit menu, Paste features as, select Scratch temporary Layer

Apply and Open the newly created layer attribute table

In master, the attribute table is empty (I will need to check if it's the case also on Linux but it occurs for sure on Windows). In 2.18.15, you have the fields available and filled.

This occurs also when you choose a "New vector layer" as destination; you'll notice in the "Save Vector Layer as..." dialog that the fields section is empty!

PS: I'm not sure of the selected category

Confirmed here on Windows (qgis rev e02ff050ad). I think this should be flagged as blocker since it's a regression.
