

QGIS Application - Feature request #17733

Ability to re-read PostGIS table definition

2017-12-21 12:38 PM - Nikolay Lebedev

Status:	Open	
Priority:	Normal	
Assignee:	Jürgen Fischer	
Category:	Data Provider/PostGIS	
Pull Request or Patch supplied:	No	Resolution:
Easy fix?:	No	Copied to github as #: 25629
Description		
<p>In many cases postgres tables are changed outside QGIS (via pgAdmin, psql console etc.).</p> <p>One common example is when a default value added to a column (i.e. next sequence value).</p> <p>For QGIS to catch with this changes, you have to re-add table to the project, copy styling from the current version and remove then remove it.</p> <p>Could've been a lot more convenient to just re-read table definition from DB with a click of a button. A button in Layer properties window would be nice.</p> <p>Something similar is used in `Update SQL Layer` for layers added from DB Manager queries.</p>
