# QGIS Application - Bug report #17777

### Text goes over itself in text areas on display that has different display scaling than the main display.

2018-01-03 12:33 PM - Lauri Kajan

Status: Feedback
Priority: Normal

Affected QGIS version:masterRegression?:NoOperating System:Windows 10Easy fix?:No

Pull Request or Patch supplied: Resolution:

Crashes QGIS or corrupts data: Copied to github as #: 25673

### **Description**

Text is unreadable in textboxes for example on expression dialog or python console. Characters go over each other and cursor is located in wrong place (see image).

This happens when qgis is used on a display that has different display scaling than main display.

My main display has scaling 100% and the external monitor has 150%.
