

QGIS Application - Bug report #1785

multiple maps for r.report and r.covar

2009-07-16 04:06 AM - Paolo Cavallini

Status:	Closed	
Priority:	Low	
Assignee:		
Category:	GRASS	
Affected QGIS version:	master	Regression?: No
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	No	Copied to github as #: 11845
Description		
<p>r.report has the possibility of making cross-reports on more than one map. It would be nice to keep this capability in the QGIS plugin. This can be done either by adding a new module (r.report.multiple?) or allowing an user to choose more than one map in order to obtain crosstabs</p>

Same things applies to r.covar, only it is more important. In the case of r.covar, both the correlation matrix (option -r) and the covariance matrix should be shown
