

QGIS Application - Feature request #17873  
make composer item's (e.g.: attribute table) position values recallable.

2018-01-17 12:01 AM - Kepes Ádám

Status:	Open	Resolution: Copied to github as #: 25768
Priority:	High	
Assignee:		
Category:	Map Composer/Printing	
Pull Request or Patch supplied:		
Easy fix?:	Yes	
Description		
A seen on the picture, 'item_id' is a variable. That would be very useful to recall another item's position variable (x,y, width, height). This way , in the situation seen on the picture, in the case of two or more attribute tables they could be automatically placed with a query in their position field.
