<b>Description</b>		
<p>If i use any other reference point than top-left in any element when exporting (to image, pdf, etc). The element will be repositioned with the top-left element coordinates at the reference point location, moving the element in the exported file and in the layout. Repeated exports will move the element off the page...</p> <p>Included example images with layout elements with different reference points, before and after export to pdf.</p>
