**Description**

It should be possible, in the Add Postgis Layer to select more layers using Shift key and clicking only on the first one and on the last one.

This is possible in many file browsers, so people are used to it.

Also it will speedup things since adding a lot of layers would not require to individually select each of them

## Associated revisions

**Revision bf0f39ef - 2009-07-22 12:58 AM - Jürgen Fischer**

optionally allow adding postgis table addition with double click and extended selection of tables (fixes #1801)
