

QGIS Application - Bug report #18023

Handling of defect layers (Button 'Browse for Path' disabled)

2018-02-01 04:34 PM - Andreas Fürholz

Status: Closed	
Priority: Normal	
Assignee:	
Category: Unknown	
Affected QGIS version: master	Regression?: No
Operating System: Windows 10	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: invalid
Crashes QGIS or corrupts data: No	Copied to github as #: 25919
Description	
When loading a QGIS-project with a layer which is not available (e.g. location has changed) a dialog appears. With QGIS-Version 2.99.0-Master (9a020ea792) it seems not possible to edit the path (browse for button disabled).	

History

#1 - 2018-02-20 06:03 AM - Nyal Dawson

- Resolution set to invalid
- Status changed from Open to Closed

This has only ever been possible for OGR and GDAL layers - the delimited text provider doesn't support browsing for the layer. Instead you need to manually edit the connection string.
