

QGIS Application - Bug report #18077

QGIS crashes when running "Fix Geometries" Processing algorithm on the attached layer

2018-02-12 01:36 AM - gcarrillo -

Status:	Closed	
Priority:	Normal	
Assignee:	Victor Olaya	
Category:	Processing/QGIS	
Affected QGIS version:	master	Regression?: No
Operating System:	GNU/Linux (Linux Mint based on Ubuntu Xubuntu 18.04)	Easy fix?: No
Pull Request or Patch applied:	Yes	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 25973

Description

I attach a GeoPackage DB with a single layer, which in turns has a single MultiLineString geometry.

This is the WKT representation of the geometry:

```
>>>feature.geometry().asWkt()
'MultiLineString ((356984.0625 6300089, 356984.0625 6300089))'
```

As soon as I run the "Fix Geometries" algorithm, QGIS crashes. This is the last part of the backtrace (hope that it helps):

```
