<b>Affected QGIS version:</b>	3.0.0	<b>Regression?:</b> No
<b>Operating System:</b>		<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>		<b>Resolution:</b>
<b>Crashes QGIS or corrupts data:</b>		<b>Copied to github as #:</b> 26114
<b>Description</b>		
<p>The subdivide algorithm help (in app and in docs) states that</p> <div><p><i>The returned geometry parts may not be valid and may contain self-intersections.</i></p></div> <p>I'm not sure this comment adds confidence in the tool. Shouldn't creation of invalid features be considered as a bug and fixed in the tool instead?</p>
