QGIS Application - Feature request #18224 Extend Identify Tool to work with Selection tools

2018-02-26 12:30 PM - Saber Razmjooei

Status: Closed Priority: Normal

Assignee: Viktor Sklencar
Category: Map Canvas

Pull Request or Patch supplied: Resolution: fixed/implemented

Easy fix?: No Copied to github as #: 26115

Description

Currently, users can only click on a single point (with adjustments to radius in pixels) to identify features.

I am proposing to add another Mode, where user can use selection tools to identify features within a radius, polygon or rectangular area.
