Crashes QGIS or corrupts data:	No	Copied to github as #: 26117
Description		
<p>Open the vertex editor, the panel is placed at the bottom of the left panels.</p> <p>Then move it so that it covers the height of the map canvas (shows more vertices), near the layers panel.</p> <p>Do another operation so that the vertex panel is closed.</p> <p>Now reopen the vertex editor: it's again at the bottom of the other panels instead of keeping its last position.</p>
