Description I would like to have a context menu (right click menu) for different print composer objects. It would include items, such as edit, undo, some manipulation features for instance.

[FEATURE][layouts] Add group/ungroup action to layout context menu

Group/ungroup actions show only when an appropriate selection is present. I.e. "group" appears when a selection of at least two items is present, and "ungroup" appears only when at least one of the selected items is a group.
